

SOFTWARE REQUIREMENTS SPECIFICATION FOR PAW PORTAL

1. Introduction

1.1 Purpose

The Paw Portal is a web-based application designed to streamline animal welfare efforts by integrating volunteer management, donations, pet adoption, rescue tracking, and educational content. The platform provides a centralized system for individuals and organizations dedicated to animal rescue and adoption, ensuring an efficient workflow and enhanced user engagement through a user-friendly UI/UX.

1.2 Document Conventions

This document follows IEEE SRS standards, maintaining structured formatting for functional and non-functional requirements.

1.3 Intended Audience and Reading Suggestions

- **Developers:** Understand technical requirements for development.
- **Project Stakeholders:** Review system goals and functionalities.
- **Testers:** Refer to requirements for validation.
- **End Users:** Understand the scope of features and functionalities.

1.4 Product Scope

The Paw Portal is a comprehensive platform designed to assist animal welfare organizations and individuals in managing rescue operations, fostering, and adoption processes. The platform includes:

- Volunteer registration and management.
- A donation system integrated with payment gateways.
- A pet profile and adoption process.
- Interactive maps for stray animal sightings and rescue tracking.
- Educational content on animal care and welfare.
- Pet surrender and foster request features.
- An impact dashboard for tracking rescue and adoption efforts.
- Crowdsourced rescue coordination.

2. Overall Description

2.1 Product Perspective

The system is an independent web application designed to serve animal welfare organizations and volunteers. The technology stack includes:

- **Frontend:** HTML, CSS, JavaScript, React.js

- **Backend:** Node.js
- **Database:** MongoDB
- **Deployment:** Cloud-based hosting
- **Supported Browsers:** Chrome, Firefox, Edge

2.2 User Classes and Characteristics

- **Volunteers:** Can register and participate in rescue operations.
- **Donors:** Can make one-time or recurring donations.
- **Adopters:** Can browse pet profiles and apply for adoption.
- **Rescue Teams:** Can track and manage stray animal rescues.
- **Admins:** Have full control over content, users, and system settings.

2.3 Operating Environment

- **Frontend:** HTML, CSS, JavaScript, React.js
- **Backend:** Node.js
- **Database:** MongoDB
- **Hosting:** Cloud-based deployment
- **Supported Browsers:** Chrome, Firefox, Edge

2.4 Constraints

- Authentication and authorization must be secure.
- The system should handle multiple users simultaneously.
- The platform will not authenticate NGOs or validate their activities.

3. Functional Requirements

3.1 User Authentication & Roles

- **FR1:** Users must register and log in to access the system.
- **FR2:** Volunteers can register and participate in rescues.
- **FR3:** Donors can contribute to rescue efforts.
- **FR4:** Admins can manage users and

4. System Flow
